## **DETAILED ACTION**

### ***Election/Restrictions***

The Applicant's election of Species 4 of Group I as claimed in claims 1, 3 and 4 with traverse is noted in the correspondence submitted on 09-19-2005. However, the Applicant's arguments are solely directed to U.S. restriction practice. The restriction and election put forth by the Examiner on 08-18-2005 is based on PCT Rule 13. The standards for lack of unity are different than those applicable in U.S. restriction practice. The Examiner does not have to prove or state that a different field of search would be necessary. As such, the lack of unity requirement is final.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burnett (US Patent 5,899,802) in view of Dew (US Patent 4,196,221).

Burnett teaches tenderizing poultry meat through constant electrical stimulation.

Burnett teaches supplying live poultry, stunning the live poultry in a stunning device, placing the stunned poultry into product carriers advanced along a conveyor, killing the stunned poultry, and removing the feathers from the dead poultry in a plucking device.

An electrical voltage is applied across the carcass of the poultry at the location of the breast of the carcass as the carcass is led over an electrode connected to a power

source. However, Burnett does not teach an electrical stimulation downstream of the plucking device. Dew teaches processing food products, i.e. plucked poultry carcasses, by spraying the food products with water by electrostatic polarization of the water before or during chilling.

Regarding claim 1, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the apparatus of Burnett with an electrical stimulation, in view of the teachings of Dew, in order to reduce the amount of water used in the processing of the food product and improved washing of the food products.

### ***Conclusion***

Summary: Claims 1, 3 and 4 are rejected.
